Timing of prenatal care entry is calculated from birth certificate values for date of first prenatal care visit and either menses date or date of birth and estimate of gestation. Missing prenatal care entry values indicate missing or invalid data for one or more of these items. As of 2014, records do not include out-of-state deliveries to Washington residents because birth certificates for states other than Washington were not available for record linkage. State total includes a small number of women for whom residence ACH could not be determined.
