

Topical Immunosuppressives - Calcineurin Inhibitors

Medical policy no. 90.78.40-2

Effective Date: 10/1/2025

Related medical policies:

Policy Name
90.23.00.AA-3 Atopic Dermatitis Agents – Topical Phosphodiesterase 4 (PDE4) Inhibitors
66.27.00.AB-4 Cytokine and CAM Antagonists: IL-4/IL-13 Inhibitors

Note: New-to-market drugs are non-preferred and subject to this class/category prior authorization (PA) criteria. Non-preferred agents in this class/category, require an inadequate response or documented intolerance due to severe adverse reaction or contraindication to at least TWO preferred agents. If there is only one preferred agent in the class/category documentation of inadequate response to ONE preferred agent is needed.

Medical necessity

Drug	Medical Necessity
pimecrolimus (Elidel) tacrolimus	<p>Topical Immunosuppressive – Calcineurin Inhibitors may be considered medically necessary in patients who meet the criteria described in the clinical policy below.</p> <ul style="list-style-type: none"> Non-preferred brand name products on the Apple Health Preferred Drug List with an A-rated generic equivalent must also meet criteria in Non-Clinical Policy No. 0001 (NC-001). <p>If all criteria are not met, the clinical reviewer may determine there is a medically necessary need and approve on a case-by-case basis. The clinical reviewer may choose to use the reauthorization criteria when a patient has been previously established on therapy and is new to Apple Health.</p>

Clinical policy:

Clinical Criteria	
Atopic Dermatitis pimecrolimus (Elidel) tacrolimus	<p>Tacrolimus or pimecrolimus (Elidel) may be approved when all of the following documented criteria are met:</p> <ol style="list-style-type: none"> The patient meets one of the following age criteria: <ol style="list-style-type: none"> For all pimecrolimus products, 2 years or older; OR

	<ul style="list-style-type: none"> b. For tacrolimus 0.03% products, 2 years or older; OR c. For tacrolimus 0.1% products, 16 years or older; AND <ol style="list-style-type: none"> 2. Diagnosis of atopic dermatitis; AND 3. Patient meets one of the following: <ul style="list-style-type: none"> a. Baseline body surface area (BSA) involvement is provided; OR b. Baseline disease severity scale scoring (e.g., Investigator's Global Assessment (IGA) score; Eczema Area and Severity Index (EASI), Patient Oriented Eczema Measure (POEM), etc.) is provided; AND 4. History of failure, contraindication, or intolerance to at least one topical corticosteroid [minimum trial of 28 days] <ul style="list-style-type: none"> a. Contraindications to topical corticosteroids include: <ul style="list-style-type: none"> i. Treatment of sensitive areas (face, anogenital, skin folds); OR ii. History of steroid-induced atrophy; AND 5. For non-preferred products within this class, treatment with one Apple Health Preferred Drug List (PDL) medication has been ineffective, contraindicated, or is not tolerated. <p>If ALL criteria are met, the request will be authorized for 12 months.</p> <p>Criteria (Reauthorization)</p> <p>Tacrolimus or pimecrolimus (Elidel) may be approved when all the following documented criteria are met:</p> <ol style="list-style-type: none"> 1. Documentation is submitted demonstrating disease stability or a positive clinical response [e.g., reduction in body surface area involvement, achieved or maintained clear or minimal disease (equivalent to IGA score of 0 or 1, experienced or maintained a decrease in EASI score)] from baseline. <p>If ALL criteria are met, the request will be authorized for 12 months.</p>
Vitiligo Tacrolimus 0.1%	<p>Tacrolimus 0.1% may be approved when all the following documented criteria are met:</p> <ol style="list-style-type: none"> 1. The patient is 2 years of age or older; AND 2. Diagnosis of vitiligo that has been present for at least 3 months; AND 3. Baseline assessment of the disease, body surface area (BSA) involvement, and disease severity is provided; AND 4. History of failure, contraindication, or intolerance to at least one medium-to-high potency topical corticosteroid (e.g. betamethasone, mometasone, clobetasol, fluocinonide) [minimum trial of 2 months] <ul style="list-style-type: none"> a. Contraindications to topical corticosteroids include: <ul style="list-style-type: none"> i. Treatment of sensitive areas (face, anogenital, skin folds).

	ii. History of steroid-induced atrophy.
	If ALL criteria are met, the request will be authorized for 12 months .
	Criteria (Reauthorization) Tacrolimus 0.1% may be approved when all the following documented criteria are met: <ol style="list-style-type: none"> 1. Documentation is submitted demonstrating disease stability or a positive clinical response [e.g., improvement in F-VASI and/or T-VASI score, or reduction in total BSA involvement] from baseline. If ALL criteria are met, the request will be authorized for 12 months .

Dosage and quantity limits

Drug	Indication	Approved Dose	Dosage Form and Quantity Limit
Pimecrolimus (Elidel)	Atopic dermatitis	Apply to the affected skin twice daily	<ul style="list-style-type: none"> 1% cream: 1 tube (up to 100 g) per 30 days
Tacrolimus	Atopic dermatitis	Apply to the affected skin twice daily	<ul style="list-style-type: none"> 0.03% ointment: 1 tube (up to 100 g) per 30 days 0.1% ointment: 1 tube (up to 100 g) per 30 days
	Vitiligo	Apply to the affected skin twice daily	<ul style="list-style-type: none"> 0.03% ointment: 1 tube (up to 100 g) per 30 days 0.1% ointment: 1 tube (up to 100 g) per 30 days

Background:

Atopic dermatitis (AD) is a chronic, non-contagious, inflammatory disease of the skin resulting from a combination of genetic and environmental factors. Often referred to as “eczema,” it is characterized by extremely dry, itchy skin on the insides of the elbows, behind the knees, and on the face, hands, and feet. The American Academy of Dermatology guidelines for the care and management of atopic dermatitis recommend the use of topical corticosteroids in patients who have failed to respond to good skin care and regular use of emollients alone. The guidelines recommend using topical calcineurin inhibitors in the following situations: patients’ refractory to topical corticosteroids, use in sensitive areas (e.g. face, axilla, anogenital region, and skin folds), patients with steroid induced-atrophy, and in patients who require long-term treatment. Topical calcineurin inhibitors are immunosuppressive drugs that block cytokines (chemical messengers) that trigger the inflammatory response. Once absorbed into the skin, topical calcineurin inhibitors reduce symptoms of AD like redness and itchiness

Vitiligo is a chronic autoimmune skin disorder which causes depigmentation on areas of skin. This depigmentation often has a psychological impact which includes depression, low self-esteem, and stigmatization.⁵ “Topical corticosteroids are recommended for the treatment of vitiligo and carry risk with extended durations of use (e.g. skin atrophy). Topical calcineurin inhibitors are recommended for treatment, especially when areas of the face, anogenital, and skin folds are involved.”⁶

History

Approved Date	Effective Date	Version	Action and Summary of Changes
04/16/2025	10/01/2025	90.78.40-2	Updated clinical criteria for atopic dermatitis – decreased trial and failure to one product and added requirement for a baseline clinical assessment. Added new clinical criteria for vitiligo.
01/27/2020			Changed dose exception language to “prescriptions written by or in consultation with a specialist in dermatology.” Updated date in footnote to January 27, 2020
01/13/2020			Effective date changed to May 1, 2020
01/07/2020			Changed dose limits to age limits and included exception statement for prescriptions written by dermatologists
10/11/2019			Clarification on initial authorization criteria 3.a.i. and reauthorization criteria 1.
09/24/2019			General formatting updates
08/21/2019			Updated documentation of baseline evaluation requirement
04/18/2018			New Policy
