Excludes women with eligibility for programs using state funds only; women who are eligible for both Medicaid and Medicare; women who have full third party liability; women who were infecund; women who had a live birth in the last two months of the measurement year; and women who were pregnant at the end of the measurement year. Women may have been enrolled in more than one plan during the year. **Plan** listed is the managed care plan that the woman was enrolled in for at least 11 months during the measurement year. **Other** includes both Uncategorized and PCCM, defined as follows: **Uncategorized** indicates that a woman had more measurement year months in managed care than in fee-for-service status but was not enrolled in a single managed care plan for at least 11 months; **PCCM** is Primary Care Case Management through tribal agencies. **Most or moderately effective FDA-approved contraception methods:** female sterilization, contraceptive implants, intrauterine devices or systems, injectables, oral pills, patch, ring, or diaphragm. Continued use of some methods may not be identified in claims or encounters. **Eligible women** are women in the specified age range as of December 31 of the measurement year who were continuously enrolled in Medicaid or CHIP with medical or family planning benefits throughout the 12 months of the measurement year (one month gap allowed) and who do not meet exclusion criteria. Eligibility must include December 31 as the 'anchor' date.

LARC=long-acting reversible method of contraception (implant or IUD). Ongoing LARC use may not be identified in claims or encounters.

Eligible women are women in the specified age range as of December 31 of the measurement year who were continuously enrolled in Medicaid or CHIP with medical or family planning benefits throughout the 12 months of the measurement year (one month gap allowed) and who do not meet exclusion criteria. Eligibility must include December 31 as the 'anchor' date. **Excludes** women with eligibility for programs using state funds only; women who are eligible for both Medicaid and Medicare; women who have full third party liability; women who were infecund; women who had a live birth in the last two months of the measurement year; and women who were pregnant at the end of the measurement year. Women may have been enrolled in more than one plan during the year. **Plan** listed is the managed care plan that the woman was enrolled in for at least 11 months during the measurement year.

Other includes both Uncategorized and PCCM, defined as follows: **Uncategorized** indicates that a woman had more measurement year months in managed care than in fee-for-service status but was not enrolled in a single managed care plan for at least 11 months; **PCCM** is Primary Care Case Management through tribal agencies.
