Health Technology Clinical Committee
Findings and Decision
Topic: Continuous glucose monitoring- re-review
Meeting date: January 19, 2018
Final adoption: March 16, 2018

Meeting materials are available on the HTA website.

Number and coverage topic:
20180119B - Continuous glucose monitoring

HTCC coverage determination:
Continuous glucose monitoring is a covered benefit with conditions.
This determination does not pertain to closed loop or artificial pancreas.

HTCC reimbursement determination:
Limitations of coverage:
Continuous glucose monitoring is covered for children/adolescents less than 19 years old, adults with Type 1 diabetes, and adults with Type 2 diabetes who are:
- Unable to achieve target HbA1C despite adherence to an appropriate glycemic management plan (intensive insulin therapy; testing blood glucose 4 or more times per day), OR
- Suffering from one or more severe (blood glucose < 50 mg/dl or symptomatic) episodes of hypoglycemia despite adherence to an appropriate glycemic management plan (intensive insulin therapy; testing blood glucose 4 or more times per day), OR
- Unable to recognize, or communicate about, symptoms of hypoglycemia.
Continuous glucose monitoring is covered for pregnant women with any of the following:
- Type 1 diabetes,
- Type 2 diabetes,
- Type 2 diabetes and blood glucose does not remain well controlled (HbA1C above target or experiencing episodes of hyperglycemia or hypoglycemia) on diet and/or oral medications during pregnancy and require insulin,
- Gestational diabetes whose blood glucose is not well controlled (HbA1C above target or experiencing episodes of hyperglycemia or hypoglycemia) during pregnancy and require insulin.

Non-covered indicators: N/A

HTCC coverage vote and formal action:

*Committee decision*

Based on the deliberations of key health outcomes the committee decided that it had the most complete information: a comprehensive and current evidence report, public comments, and state agency utilization information. The committee decided that the current evidence on Continuous glucose monitoring (CGM) is sufficient to make a determination on this topic. The committee discussed and voted on the evidence for use of Continuous glucose monitoring compared to self-monitoring with conventional meters and other study methods (i.e. sham CGM). The committee considered the evidence and gave greatest weight to the evidence it determined, based on objective factors, to be the most valid and reliable.

Based on these findings, the committee voted to cover Continuous glucose monitoring with conditions.

*Discussion*

The committee reviewed and discussed the available studies of Continuous glucose monitoring. Details of study design, inclusion criteria, outcomes, technology used and other factors affecting study quality were discussed. A majority of committee members found the evidence sufficient to determine that select use of Continuous glucose monitoring was equivalent for safety and equivalent for effectiveness compared to alternatives for some conditions. A majority of the committee voted to cover with conditions, Continuous glucose monitoring.

*Limitations*

N/A

*Action*

The committee checked for availability of a Medicare national coverage decision (NCD). Medicare does not have an NCD on CGM systems.

The committee discussed clinical guidelines identified for Continuous glucose monitoring from the following organizations:

- American Diabetes Association (ADA) Standards of Medical Care in Diabetes, (2017).
The committee’s determination is consistent with these guidelines.

The committee chair directed HTA staff to prepare a findings and decision document on use of Continuous glucose monitoring for public comment; followed by consideration for final approval at the next public meeting.

Health Technology Clinical Committee Authority:

Washington State’s legislature believes it is important to use a science-based, clinician-centered approach for difficult and important health care benefit decisions. Pursuant to chapter 70.14 RCW, the legislature has directed the Washington State Health Care Authority (HCA), through its Health Technology Assessment (HTA) program, to engage in an evaluation process that gathers and assesses the quality of the latest medical evidence using a scientific research company and that takes public input at all stages.

Pursuant to RCW 70.14.110 a Health Technology Clinical Committee (HTCC) composed of eleven independent health care professionals reviews all the information and renders a decision at an open public meeting. The Washington State HTCC determines how selected health technologies are covered by several state agencies (RCW 70.14.080-140). These technologies may include medical or surgical devices and procedures, medical equipment, and diagnostic tests. HTCC bases its decisions on evidence of the technology’s safety, efficacy, and cost effectiveness. Participating state agencies are required to comply with the decisions of the HTCC. HTCC decisions may be re-reviewed at the determination of the HCA Director.
