HEPATITIS C UPDATE 2020

FRIDAY, AUGUST 28, 2020 // 8:00 AM – 4:45 PM
ZOOM WEBINAR

TARGET AUDIENCE

Healthcare professionals including staff nurses, clinical nurse leaders, clinical nurse specialists, nurse practitioners, nurse educators, managers, and other interested healthcare providers.

DESCRIPTION

Hepatitis C virus (HCV) is the most common blood-borne illness in the United States and is the leading cause of liver failure, liver cancer, and liver transplantation. Approximately half of persons with HCV have never been tested and do not know they are infected. The Hepatitis C Update 2020 aims to educate and train healthcare providers in the best practices for screening, diagnosing, management, and treatment to work towards eliminating viral hepatitis C in our communities. We will explore the nuances of providing care to this population through an intersectional lens. Our audience is primarily advanced practicing providers and students, Nurse Educators, Clinical Nurse Specialists, staff nurses, and other interested healthcare providers in primary care, urgent care, and inpatient settings.
