WHAT IS HEALTH IN ALL POLICIES?

Good health requires policies that actively support health 

It requires different sectors working together, for example:

HEALTH

TRANSPORT

HOUSING

WORK

NUTRITION

WATER &
SANITATION

TO ENSURE ALL PEOPLE HAVE EQUAL OPPORTUNITIES TO ACHIEVE THE
HIGHEST LEVEL OF HEALTH

Social determinants of health are the economic and social conditions that affect health outcomes and are the underlying, contributing factors of health inequities.

Examples include housing, educational attainment, employment and the environment.

Unemployment is bad for your health:

- Higher rates of unemployment cause more illness and premature death.
- As job insecurity continues, it acts as a chronic stressor whose effects grow with the length of exposure; it increases sickness absence and health service use.
