B. Implementation Report

MHBG Table 1 Priority Area and Annual Performance Indicators - Progress Report

Priority #: 1

Priority Area: Address high disproportionate rates of SUD and MH disorders and overdoses amongst AI/AN individuals in WA state.

Priority Type: SAP, SAT

Population(s): PWWDC, PP, PWID, TB, Other

Goal of the priority area:

The goal of this priority is to address the disproportionately high rates of SUD and MH disorders for AI/AN individuals across the state. This goal is focused on addressing these rates by offering a direct allocation to Tribes through our government-to-government Indian Nation Agreements. The INA is an agreement between the HCA and Tribal governments to fund services as deemed appropriate by the Tribes to address substance use disorders using SABG dollars.

The Health Care Authority follows the RCW 43.376 and a communication and consultation policy which outlines the state regulations for G2G relationships with Tribes. The Office of Tribal Affairs assists DBHR in implementation of various consultation and confirm meetings with the 29 Tribes and urban Indian health programs. By extension of the Accord and our HCA Tribal Consultation Policy, HCA offers all 29 Tribes the opportunity to access substance abuse block grant funding to help bolster prevention, treatment, overdose intervention, and recovery support services within their tribal communities.

Objective:

- Support the Tribes to use block grant funding to begin and/or maintain tribal substance use disorder community-based prevention programs and projects for youth within tribal communities.
- Support the Tribes to use block grant and other funding resources for the treatment and overdose intervention services for youth and adults who are non-insured or underinsured for treatment services. These services may include, case management, drug screening tests including urinary analysis, treatment support services (transportation, childcare), outpatient and intensive outpatient, and individual and group therapy, naloxone distribution;
- Support the Tribes to use block grant funding to develop and enhance their recovery support services programs for any non-Medicaid billable services or support to individuals who are non-insured or underinsured.
- Support the Tribes to use block grant funding to address opioid overdose and opioid use disorders in their community by delivering either OUD prevention, treatment, overdose intervention, and recovery support services.
- Support Tribes to leverage these funding resources to prioritize their strategies as appropriate to their community to ensure culturally appropriate care and the sovereign right for the Tribes to decide how best to utilize these funds and tailor programs within their community.

Strategies to attain the goal:

- Each tribe is requested to complete an annual Tribal Plan and budget that indicates how the funding will be expended for the delivery of SUD prevention, intervention, treatment, and recovery support activities which is negotiated with HCA program managers with the support of the Office of Tribal Affairs.
- Each tribe submits quarterly fiscal and programmatic reports to HCA.
- Each tribe inputs data into each appropriate data system (i.e., TARGET Data System, and Substance Use Disorder (SUD) Prevention and MH Promotion Online Data System) on a quarterly basis with the support of HCA program managers.
- Each tribe submits an Annual Narrative Report to reflect on the prevention and treatment services provided with the funding, successes within the program, challenges within the program, etc.
- HCA coordinates a biennial desk monitoring review with each Tribe as negotiated through a formal consultation process.

Edit Strategies to attain the objective here: (if needed)

-Annual Performance Indicators to measure goal success
--

Indicator #:

Indicator: Maintain substance use disorder prevention, intervention, treatment, and recovery support

services to American Indian/Alaska Natives.

Baseline Measurement: SUD Treatment - Individuals Served: 4,499

First-year target/outcome measurement: SUD Treatment - Individuals Served: 3,400

Second-year target/outcome measurement: SUD Treatment - Individuals Served: 3,400 New Second-year target/outcome measurement(if needed): SUD Treatment - Individuals Served: 3,400 **Data Source:** TARGET, or its successor, for treatment counts. Minerva - SUD Prevention and MH Promotion Online Reporting System (Washington's Prevention Management Information Service): used to report SABG prevention performance indicators. New Data Source(if needed): **Description of Data:** As reported into TARGET by Tribes, total number of AI/AN clients served between July 1, 2019 and June 30, 2020. New Description of Data: (if needed) Data issues/caveats that affect outcome measures: • Indian Health Care Providers have to enter into multiple systems in their work to improve health information technology in their programs which is burdensome. Tribes are working to move to EHRs, are using an Indian Health Services System, plus the state data systems which are often duplicative and can be expensive to dedicate additional staff to enter data into multiple systems. • TARGET is the system that is used by Tribes that is then transmitted into our Behavioral Health Data Store and HCA needs to sunset this system and move to a new solution for the Tribes as promised in 2016. HCA is working on a pilot project to identify a solution to gather the SUD encounter data in the future without the TARGET system. • SUD Prevention numbers may include duplication of client counts due to Tribes reporting number of people in attendance at events for each day. · Additionally, the prevention reporting system is also transitioning vendors in Fall 2021 and Tribes will need to learn a new system, this may increase data reporting challenges in some areas. HCA is working to ensure all Tribes are supported and engaged in this process to minimize the impact. New Data issues/caveats that affect outcome measures: Report of Progress Toward Goal Attainment Achieved Not Achieved (if not achieved, explain why) First Year Target: Reason why target was not achieved, and changes proposed to meet target: Goal was SUD Treatment - Individuals served: 3,400 (prevention - 52,052 total participants); Actual was SUD Treeatment - Individuals served: 3,335 (prevention - 51,714) Priority will be adjusted next year to capture prevention. There are several reasons for the slight unmet treatment and prevention encounter goals. We believe that the decline is likely due to the continuation of Tribes addressing the COVID pandemic and maintenance of social distancing protocols. For example, the annual Canoe Journey was canceled again in 2022. We believe that there will be an increase in prevention service community events as we witness more events taking place across the state. Another reason is due to workforce. We have learned that many Tribes are facing significant workforce shortages for treatment, recovery, and prevention service providers. Workforce shortages has caused Tribes the ability to implement planned programs through their Indian Nation Agreements. Additionally, the unmet goal is also due to our data collection processes. Our team continues to work on a solution to the need to sunset the TARGET data system for Tribes. Currently, the HCA has no technical assistance support to Tribes to enter data into the data system. However, our team is working on a solution to this issue and working with several Tribes on a pilot project to move Tribes from TARGET into the State's current supplemental data system, the Behavioral Health Data Store. In addition to the data issues around TARGET, our prevention team also changed their prevention data system in the past year. This change likely has a minimal impact on data reporting. How first year target was achieved (optional): Achieved Not Achieved (if not achieved, explain why) Second Year Target: Reason why target was not achieved, and changes proposed to meet target: Goal was SUD Treatment - Individuals Served: 4,954; SUD Prevention & MH Promotion AI/AN: 28,468 There are several reasons for the unmet prevention encounter goals. We believe the numbers of individuals served and data reporting continue to be impacted by the COVID pandemic, including the lack of workforce by system impact of lack of workforce and returning

to in person activities. Although, services have increased since prior years of the pandemic, the impact of pandemic continues to have

lingering impacts to Tribal treatment, prevention and other BH services including impacts to the treatment workforce. We work with several Tribes that are not operating at full capacity for treatment and behavioral health services due to a lack of staff and BH supervision.

Additionally, the unmet goal is also due to our data collection processes. Our team continues to work on solutions to the need to sunset the TARGET data system for tribes creating a lack of consistency in data collection across Tribal communities. Currently, the HCA has no available technical assistance support to Tribes to enter data into the TARGET data system. However, our team is working on a solution to this issue and working with several Tribes on a pilot project to move Tribes from TARGET into the State's current supplemental data system, the Behavioral Health Data Store.

In addition to the data issues around TARGET, our prevention team also changed their prevention data system in the past year. This change likely has a minimal impact on data reporting. This fiscal year, the new system has launched along with an updated guide, and we anticipate this will improve prevention data. Additionally, we believe that there will be an increase in prevention service community events as we witness more events taking place across the state

How second year target was achieved:

Priority #: 2

Priority Area: Reduce Underage and Young Adult Substance Use/Misuse

Priority Type: SAP

Population(s): PP, Other

Goal of the priority area:

Decrease the use and misuse of alcohol, marijuana, tobacco, opioids or other prescription drugs, and the use of any other drugs in the last 30 days.

Objective:

- Decrease the percentage of 10th graders who report using alcohol in the last 30 days (HYS 2018: 18.5%; Target 2023: 15%).
- Prevent the increase in the percentage of 10th graders who report using marijuana (cannabis) in the last 30 days (HYS 2018: 17.9%, Target 2023: 12%).
- Decrease the percentage of 10th graders who report using tobacco products in the last 30 days (HYS 2018 Tobacco, any form except vape: 7.9%, Target 2023: 7.1%; HYS 2018 Vape: 21.2%, Target 2023: 19.1%).
- Decrease the percentage of 10th graders who report misusing/abusing painkillers in the past 30 days (HYS 2018: 3.6%, Target 2023: 2.0%).
- Decrease the percentage of young adults who report using non-medical marijuana (cannabis) (YAHS 2018: 48.5%; Target 2023: 43.7%)
- Decrease the percentage of young adults who report using alcohol in the last 30 days (YAHS 2018: 61.1%; Target 2023: 55%)

Strategies to attain the goal:

- Implement performance-based contracting with each prevention contractor.
- Adapt programs to address the unique needs of each tribe.
- Strategies to serve AI/AN communities with increased risk for SUD concerns through various prevention projects using leveraged resources and ensure culturally appropriate services.
- Deliver Evidenced-based Prevention Programs and Strategies according to approved strategic plans.
- Deliver direct prevention services (All CSAP Strategies).
- Deliver community-based prevention services (Community-based process, Information Dissemination and Environmental).
- Provide statewide Workforce Development Training to build capacity for service delivery.
- Develop best practices strategies to target underserved populations such as Tribal and urban Indian communities, Black, Indigenous, and People of Color.

Edit Strategies to attain the objective here: (if needed)

Annual Performance Indicators to measure goal success

Indicator #:

Indicator: Reduce substance use/misuse

Baseline Measurement: Average of 15,590 unduplicated participants served by direct services provided between SFY

2014-2019 (July 1, 2013 – June 30, 2019)

First-year target/outcome measurement: Increase or maintain 15,590 unduplicated participants in direct services prevention

programs.

Second-year target/outcome measurement: Increase or maintain 15,590 unduplicated participants in direct services prevention Printed: 1/2/2024 11:43 AM - Washington - 0930-0168 Approved: 06/15/2023 Expires: 06/30/2025

programs. New Second-year target/outcome measurement(if needed): **Data Source:** Minerva - SUD Prevention and MH Promotion Online Reporting System (Washington's Prevention Management Information Service): used to report SABG performance indicators. Washington State Healthy Youth Survey (HYS): used to report 30 days use biannually. Washington State Young Adult Health Survey (YAHS): used to report young adult (Ages 18-25) substance use/misuse. New Data Source(if needed): **Description of Data:** SABG performance indicators are used to measure Center for Substance Abuse Prevention Strategies and Institute of Medicine Categories for services provided annually. From HYS, 10th grade Substance Use Among Washington Youth is used to measure intermediate outcomes. From Washington State Young Adult Health Survey (YAHS), Substance Use Among Washington young adults is used to measure intermediate outcomes. New Description of Data:(if needed) Data issues/caveats that affect outcome measures: Data integrity can be negatively affected by staff turnover and contractor capacity to report accurately and in a timely manner. DBHR continues to provide on-going training and technical assistance to support grantees as they use the Management Information System. Additionally, the prevention reporting system is also transitioning vendors in Fall 2021 and all providers will need to learn a new system, this may increase data reporting challenges in some areas. HCA is working to ensure all providers are supported and engaged in this process to minimize the impact. New Data issues/caveats that affect outcome measures: Report of Progress Toward Goal Attainment **✓** Achieved First Year Target: Not Achieved (if not achieved, explain why) Reason why target was not achieved, and changes proposed to meet target: How first year target was achieved (optional): Our goal was maintain at least 15,590 unduplicated participants in direct services prevention programs, we achieved this goal by serving 22,912 unduplicated participants during FY22. During late 2021, using leveraged funds from SAMHSA discretionary grants, DBHR Px expanded the number of sub-recipients receiving funds for our Community Prevention and Wellness Initiative program. The Community Prevention and Wellness Initiative now has nearly 100 coalitions and student assistance programs in over 100 schools in total. This is responsible for the increase in services that were provided during SFY 22 Achieved Not Achieved (if not achieved, explain why) Second Year Target: Reason why target was not achieved, and changes proposed to meet target: Our goal was maintain at least 15,590 unduplicated participants in direct services prevention programs, we did not achieved this goal by serving 14,941 unduplicated participants during FY23. Our goal was to increase or maintain at least 15,590 unduplicated participants engaged in direct service prevention programs. During FY 2023, 14,941 unduplicated participants were engaged in direct service prevention programs, accomplishing 96% of the proposed goal. During FY 2023, using SABG and leveraged funds from SAMHSA discretionary grants, the SUD Prevention and Mental Health Promotion section sustained the number of sub-recipients receiving funds for our Community Prevention and Wellness Initiative program and introduced a new management information system (MIS) for reporting prevention services. The Community Prevention and Wellness Initiative is a two-pronged local community and school-based approach to preventing substance use disorder, now providing services through 100 coalitions and student assistance programs in over 100 schools throughout Washington state. Through the introduction of the new MIS, data migration from the prior system had some impact on capturing individual participants. This decrease in capturing individual participants resulted in a higher number of participants being recorded in groups and population reach activities in the new MIS overall and likely contributed to the 4% decrease in proposed unduplicated participants engaged in direct service prevention

programs during FY 2023. We are currently working to stabilize the new MIS reporting and re-examine future goals to align with our

How second yea	r target was achieved:			

Priority #: 3

Priority Area: Increase the number of youths receiving outpatient substance use disorder treatment

Priority Type: SAT

Population(s): PWWDC, PWID, Other

Goal of the priority area:

Increase the treatment initiation and engagement rates among the number of youths accessing substance use disorder outpatient services.

Objective:

- Require Behavioral Health Administrative Service Organizations (BH-ASOs) and Managed Care Organizations (MCOs) to continue to maintain behavioral health provider network adequacy for adolescents.
- Re-examine current adolescent network and capacity
- Improve access and increase available SUD outpatient services for youth.

Strategies to attain the goal:

Conduct behavioral health provider mapping efforts to identify current adolescent network. Identify access challenges and strategies to remove system barriers.

• Continue using performance-based contracts with BH-ASOs and MCOs to ensure focus and oversight of provider network.

•	nticipated reasons as to why this priority measurement target was not met in SFY22. COVID- treatment for many individuals. In response to the pandemic, agencies were forced to
· · · · · · · · · · · · · · · · · · ·	eat individuals in a remote environment. Teleworking processes helped with accessibility,

though it also created a challenge for individuals to access computers and/or phones and prevented individuals from going in person to agencies to request treatment. Other factors also continue to reshape how the SUD treatment system can respond to community needs, including workforce shortages, new state laws, and the impact of fentanyl. Many agencies were forced to decrease the accessibility of appointments for assessment and treatment or closed their doors altogether due to staff shortages. Changes to Washington law regarding simple drug possession reduced the number of individuals receiving referrals to mandated assessment and treatment through the criminal legal system. All of this is exacerbated by the unanticipated impact of fentanyl, which has created challenges for treating individuals through the traditional outpatient model due to its increasing danger. Washington State continues to focus on the continuum of services to address the social determinants of health for individuals who use drugs and/or have behavioral health disorders. Outpatient treatment is but one way to measure that impact. There have been considerable investments in outreach and intensive case management services which fall outside of the traditional treatment system. The metrics we focus on as part of the priority areas will be re-evaluated to ensure that we are best representing the impact we are having in the State of Washington. How first year target was achieved (optional): Achieved Not Achieved (if not achieved, explain why) Second Year Target: Reason why target was not achieved, and changes proposed to meet target: Our goal was to increase the number of adults in SFY2023 to 48,888, we did not achieve this goal by serving 42,825 in SFY2023. We continue to increase the volume of adults who are accessing outpatient treatment for a substance use disorder; however, continue to fall short of our predetermined goals. Some of the potential reasons we are falling short: • Fentanyl has decimated WA State communities. We have to adapt how we engage with individuals who use Fentanyl. With how cheap it is (several accounts of .50 cents a pill) the frequency of use has escalated, and the daily fentanyl user requires immediate stabilization on medications for opioid use disorder prior to engaging in outpatient treatment. • The Washington State legislature continues to put additional resources into outreach and peer-driven resources that are intended to be low-barrier and influenced by principles of harm reduction. Often, this includes intensive case management and care coordination. Essentially, we are reaching the population along the continuum of care, and are counting more intercept points, which may divert someone from traditional SUD Treatment. · Historically, the criminalization of substance use created a referral pathway to SUD outpatient treatment through the criminal court system. With changes to WA State Drug Laws since 2021, individuals are not being charged for possession of controlled substance, which correlates to a reduction of individuals being referred to SUD outpatient services by Pretrial Services and Probation Officers. How second year target was achieved: Priority #: 10 **Priority Area:** Pregnant and Parenting Women **Priority Type:** SAT Population(s): **PWWDC** Goal of the priority area: Increase the number of Pregnant and Parenting Women (PPW) clients receiving case management services **Objective:** Improve the health of pregnant and parenting women and their children and help them maintain their recovery. Objective:

e TB screening is provided for all SUD treatmer	nt services.
gies to attain the goal:	
w TB screening plans with the BH-ASOs for each	ch of the state's ten regions during contract amendment cycles.
rategies to attain the objective here: ded) nnual Performance Indicators to measu	ire goal success—————————————————————————————————
Indicator #:	1
Indicator:	Provide TB screening and education at all SUD outpatient and residential provider agencies within their provider networks.
Baseline Measurement:	As of July 1, 2021, Tuberculosis screening and education is a continued required element in the BH-ASO contract for SUD treatment services.
First-year target/outcome measurement:	By July 1, 2022, ensure TB screening plans continue to be in contract with each of the ten BH-ASOs.
Second-year target/outcome measurement:	Review TB screening plans prior to the July 1, 2023 BH-ASO amendment and update as needed to ensure screenings and education services are being provided during SUD treatment services.
New Second-year target/outcome measurem	nent(if needed):
Data Source:	
Health Care Authority/BH-ASO Contracts	
Description of Data:	
The contracts between the Health Care Auth	nority and the BH-ASOs will be maintained to include this language.
New Description of Data:(if needed) Data issues/caveats that affect outcome mea	isures:
New Data issues/caveats that affect outcome	measures:
Report of Progress Toward Go	_
First Year Target: Achiev	ved Not Achieved (if not achieved,explain why)
Reason why target was not achieved, and ch	anges proposed to meet target:
): eening and education to all SUD outpatient and residential provider agencies within their the Behavioral Health Administrative Organizations (BH-ASO's) contracts.
Second Year Target: Achiev	ved Not Achieved (if not achieved,explain why)
Reason why target was not achieved, and ch	anges proposed to meet target:
How second year target was achieved:	
	reening and education to all SUD outpatient and residential provider agencies within their the Behavioral Health Administrative Organizations (BH-ASO's) contracts.
