Data measures used for affordability review selection

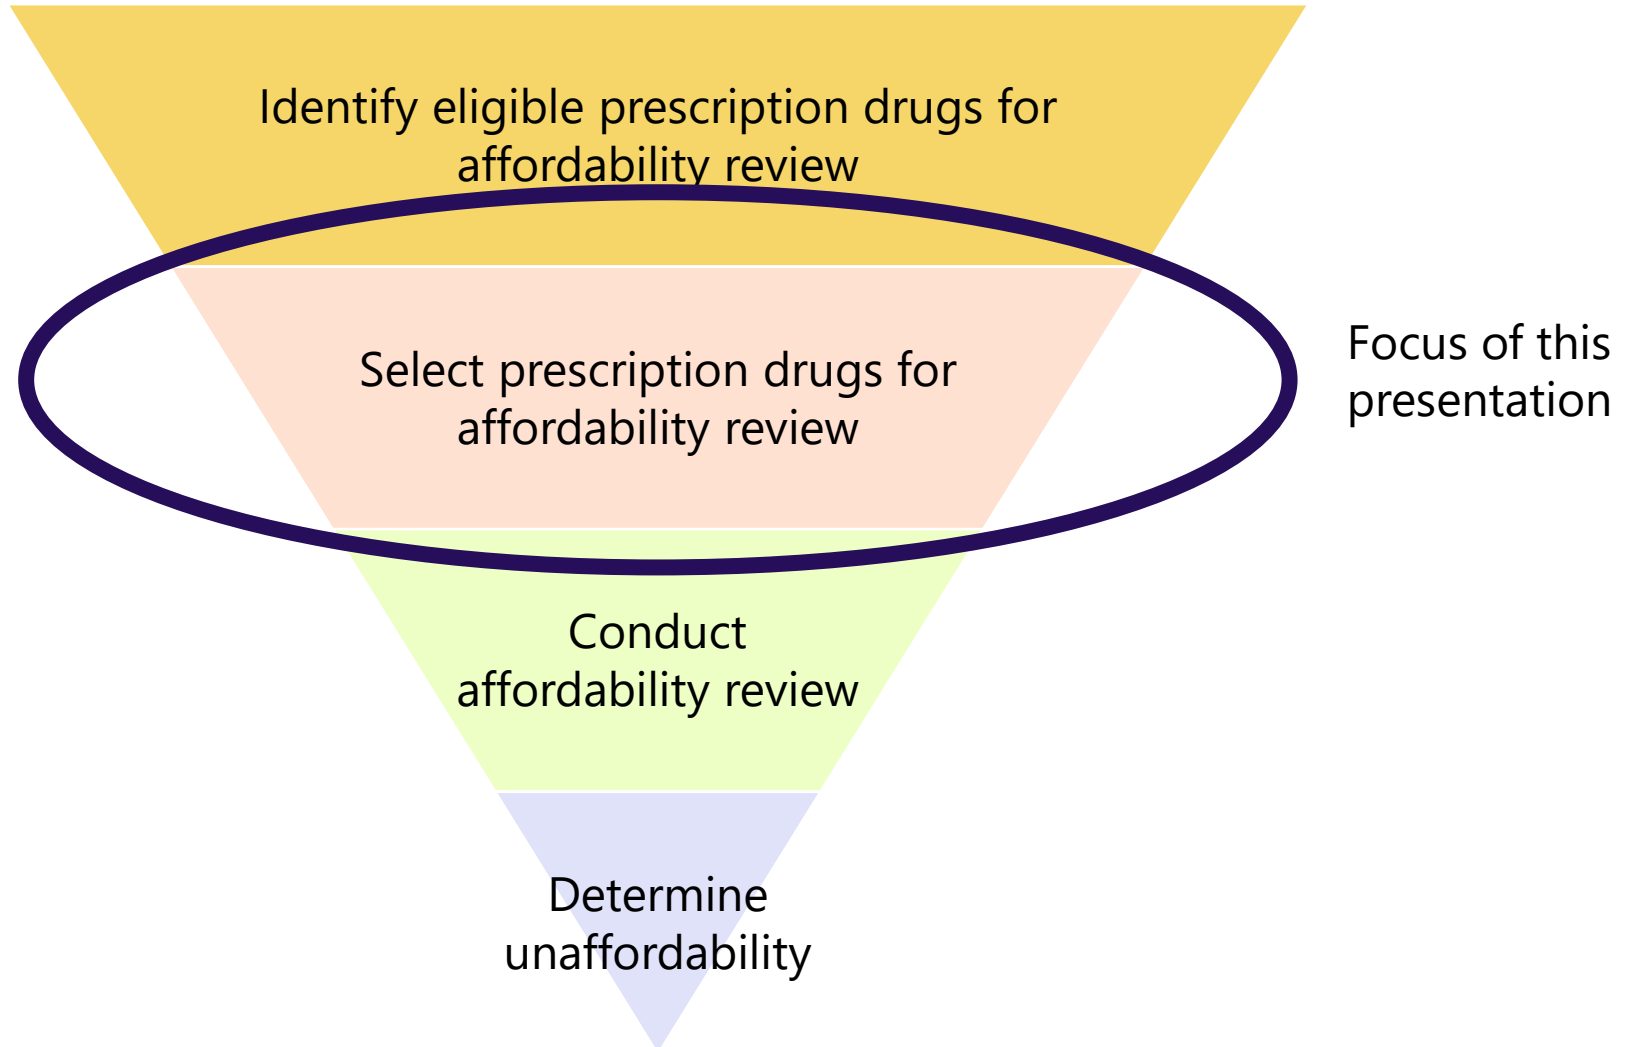

Creating shortlist of top 25 prescription drugs for affordability review

Next steps and Q&A

Overview

Brief Overview of RCW 70.405.040: Affordability Reviews

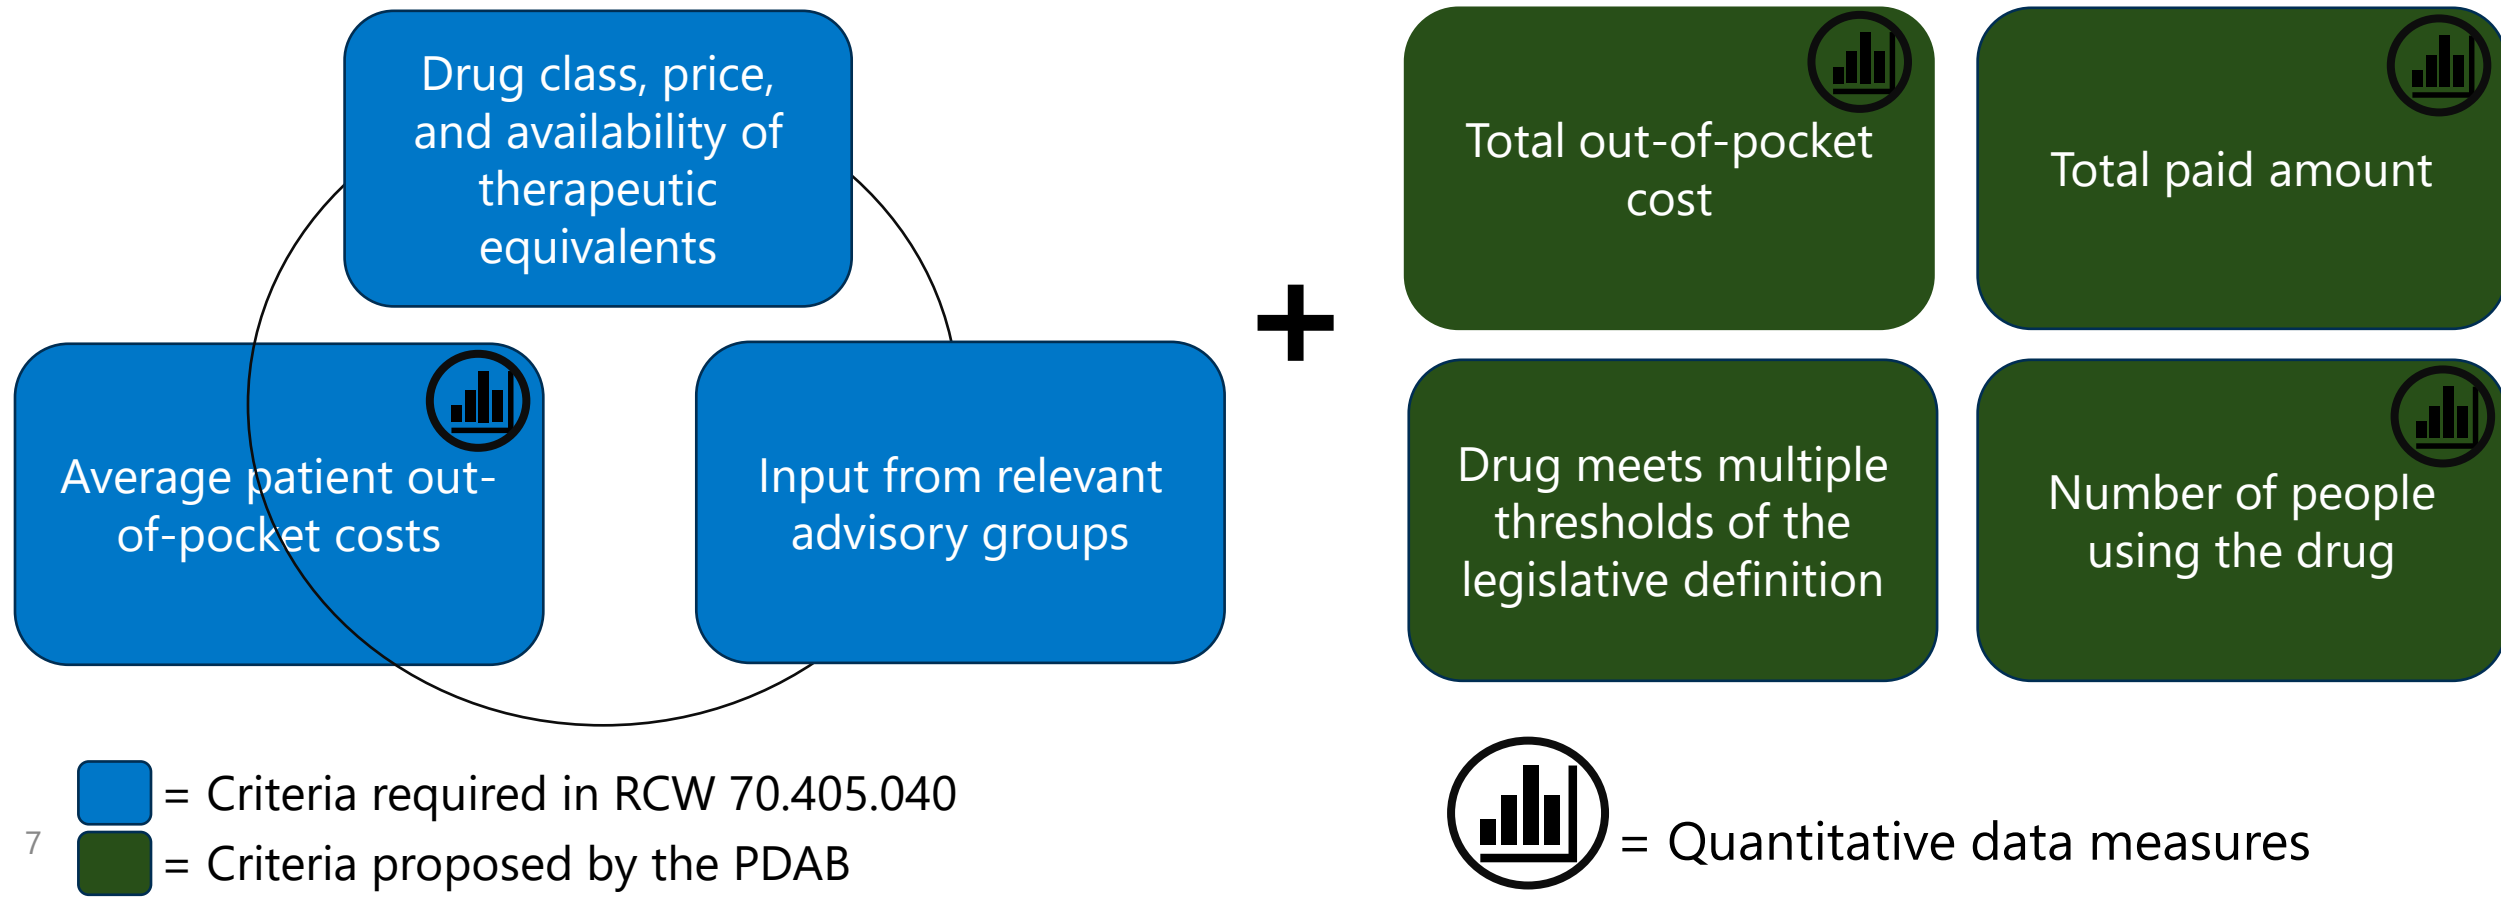

Deciding Whether to Conduct a Review

- ▶ The Board shall consider:
 - ▶ The class of the prescription drug and whether any therapeutically equivalent prescription drugs are available for sale;
 - ▶ Input from relevant advisory groups established pursuant to RCW 70.405.020; and
 - ▶ The average patient's out-of-pocket cost for the drug.
- ▶ Board can choose up to 24 drugs per year

Data Measures for Affordability Review Selection

Affordability Review Selection Criteria

The Board shall consider:

Creating the Shortlist of Prescription Drugs for Affordability Review

How Will Selection Criteria Be Used?

1

Rank and weight **quantifiable** data measures and calculate a weighted rank for each prescription drug

2

Create an affordability review shortlist consisting of the top 25 prescription drugs with the lowest weighted rank

3

Review weighted rank and both **non-quantifiable** and **quantifiable** data measures to select prescription drugs from the shortlist for affordability review

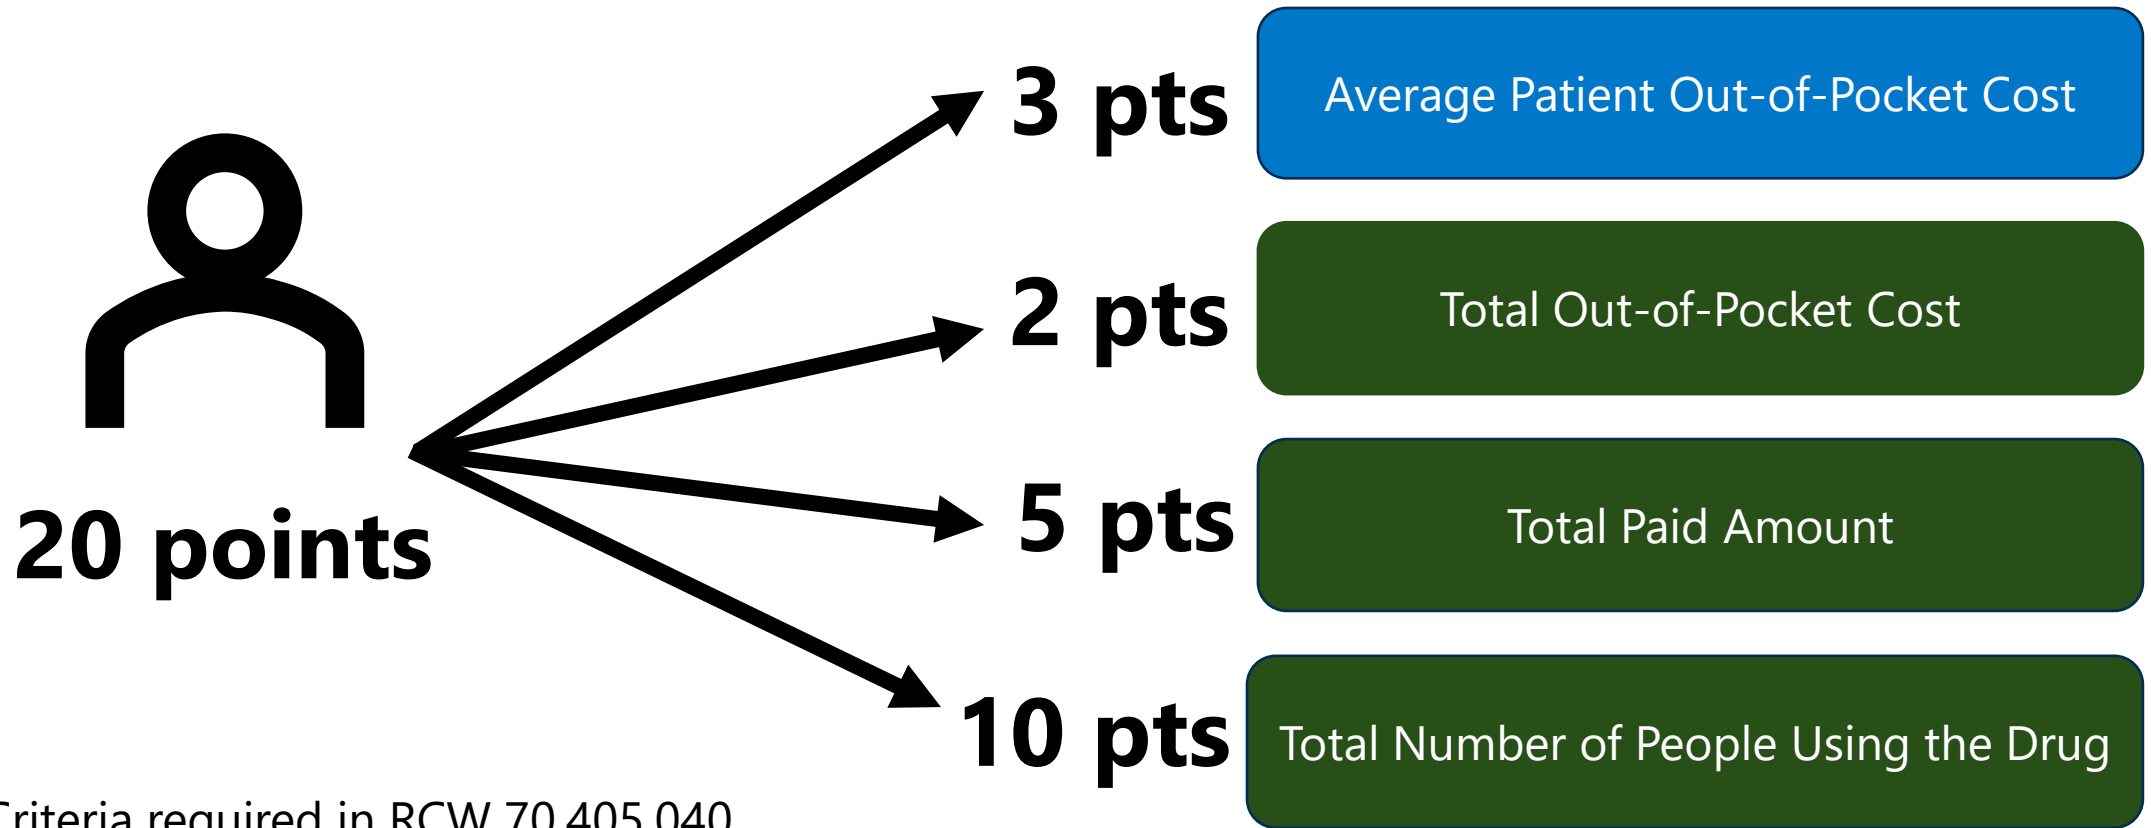

Ranking and Weighting Methodology

1. Data measure prioritization exercise to create weights
2. Separate eligible prescription drugs into two lists by specialty and non-specialty drugs
3. Sort and rank within each quantitative data measure for each list (specialty and non-specialty)
4. For each prescription drug, sum the rank for each data measure multiplied by the weight for the data measure to compute the weighted rank

Data Measure Prioritization and Weighting

- Each board member has 20 points (totaling 100 points across the board members) to allocate among the four quantitative data measures
- The more points allocated to a data measure, the more important it is to the board member
- Weights are created for each data measure by summing the allocated points for each data measure

Data Measure Prioritization Example

 = Criteria required in RCW 70.405.040

 = Criteria proposed by the PDAB

Board Member Points Allocations

Board Member	Average Out-of-Pocket Cost	Total Out-of-Pocket Cost	Total Paid Amount	Total Number of People Using the Drug	Total
1	0	15	0	5	20
2	5	7	5	3	20
3	0	5	10	5	20
4	0	10	10	0	20
5	0	10	10	0	20
Total	5	47	35	13	100
Weight (Total/100)	0.05	0.47	0.35	0.13

Separating Specialty Prescription Drugs

- ▶ Specialty: medications that require special storage, handling, administration, or monitoring.
- ▶ Biologic and biosimilar prescription drugs were flagged as specialty drugs, except those that were reclassified as biologics under the Biologics Price Competition and Innovation (BPCI) Act (59 prescription drugs identified as specialty)
- ▶ Brand and generic prescription drugs were considered non-specialty drugs (248 prescription drugs identified as non-specialty)

Data Measure Ranking

- ▶ Each quantitative data measure is sorted in descending order and assigned rankings

Data Measure Ranking Example

Drug	Average OOP Cost	Average OOP Cost Rank	Total OOP Cost	Total OOP Cost Rank	Total Paid Amount	Total Paid Amount Rank	Total # of People Using the Drug	Total # of People Using the Drug Rank
A	\$427	1	\$5,000	2	\$10,000	5	356	2
B	\$426	2	\$3,000	4	\$15,000	4	123	4
C	\$384	3	\$2,500	5	\$40,000	2	84	5
D	\$200	4	\$7,000	1	\$30,000	3	472	1
E	\$104	5	\$4,500	3	\$60,000	1	210	3

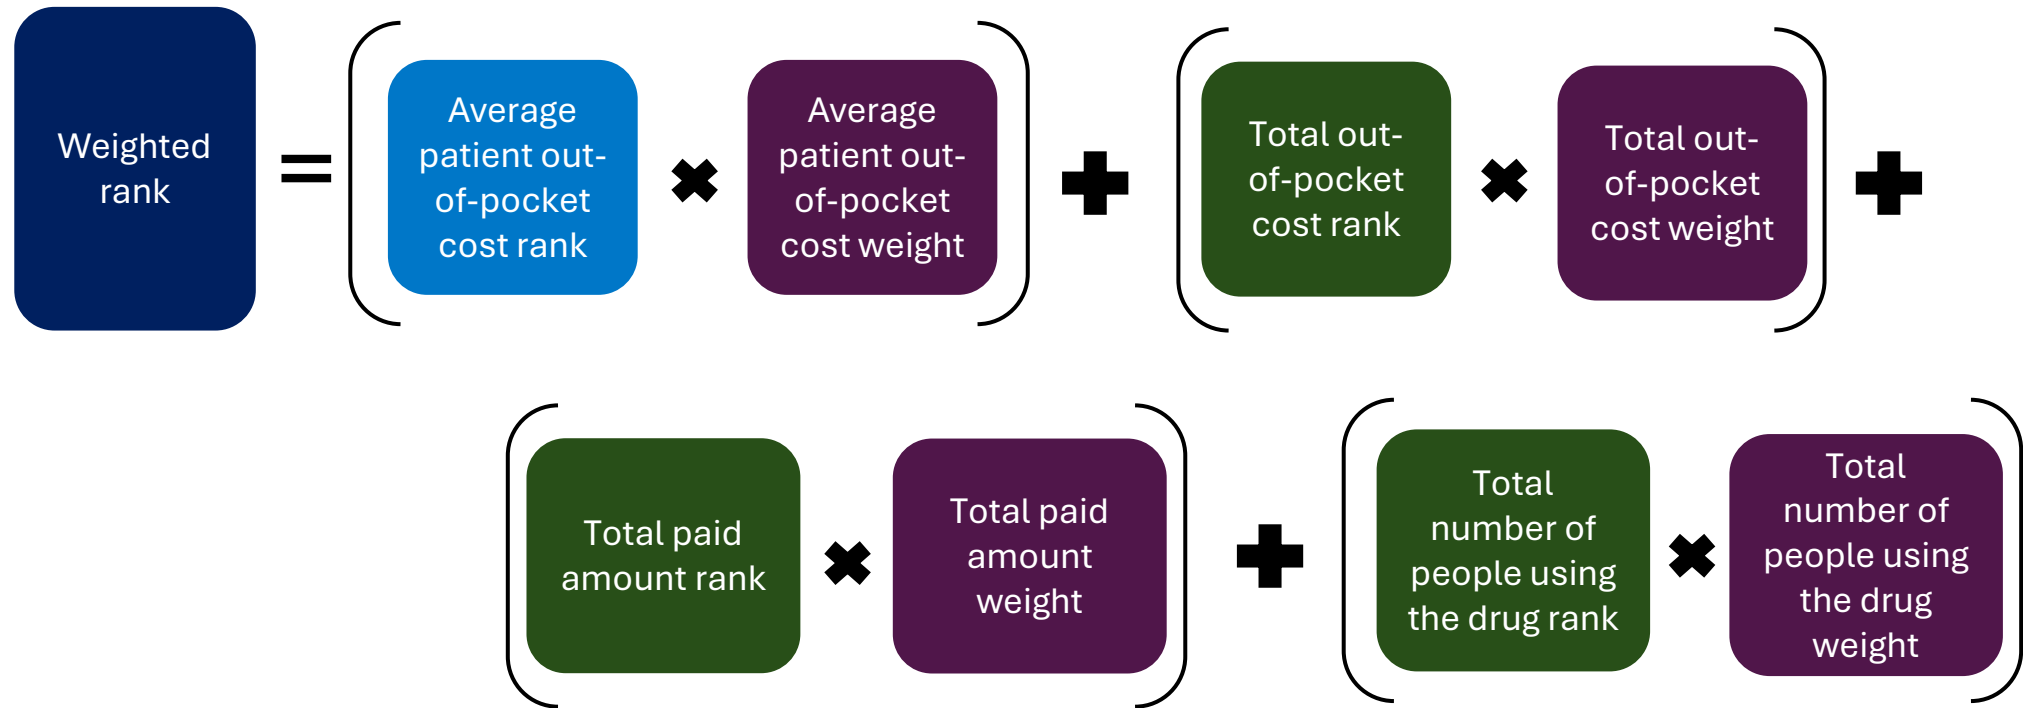

Breaking Tied Rankings

- ▶ For tied rankings, the average ranking is assigned to each tied rank.
- ▶ Example:

Drug	Total Paid Amount	Total Paid Amount Rank
A	\$4	1.0
B	\$7	2.0
C	\$12	3.5
D	\$12	3.5
E	\$19	5.0

- ▶ Drugs C and D have the same Total Paid Amount and were ranked in positions 3 and 4.
- ▶ The tied drugs' final total paid amount rank is the average of their rankings: $(3+4)/2=3.5$

Calculating Weighted Rank

Calculating Weighted Rank

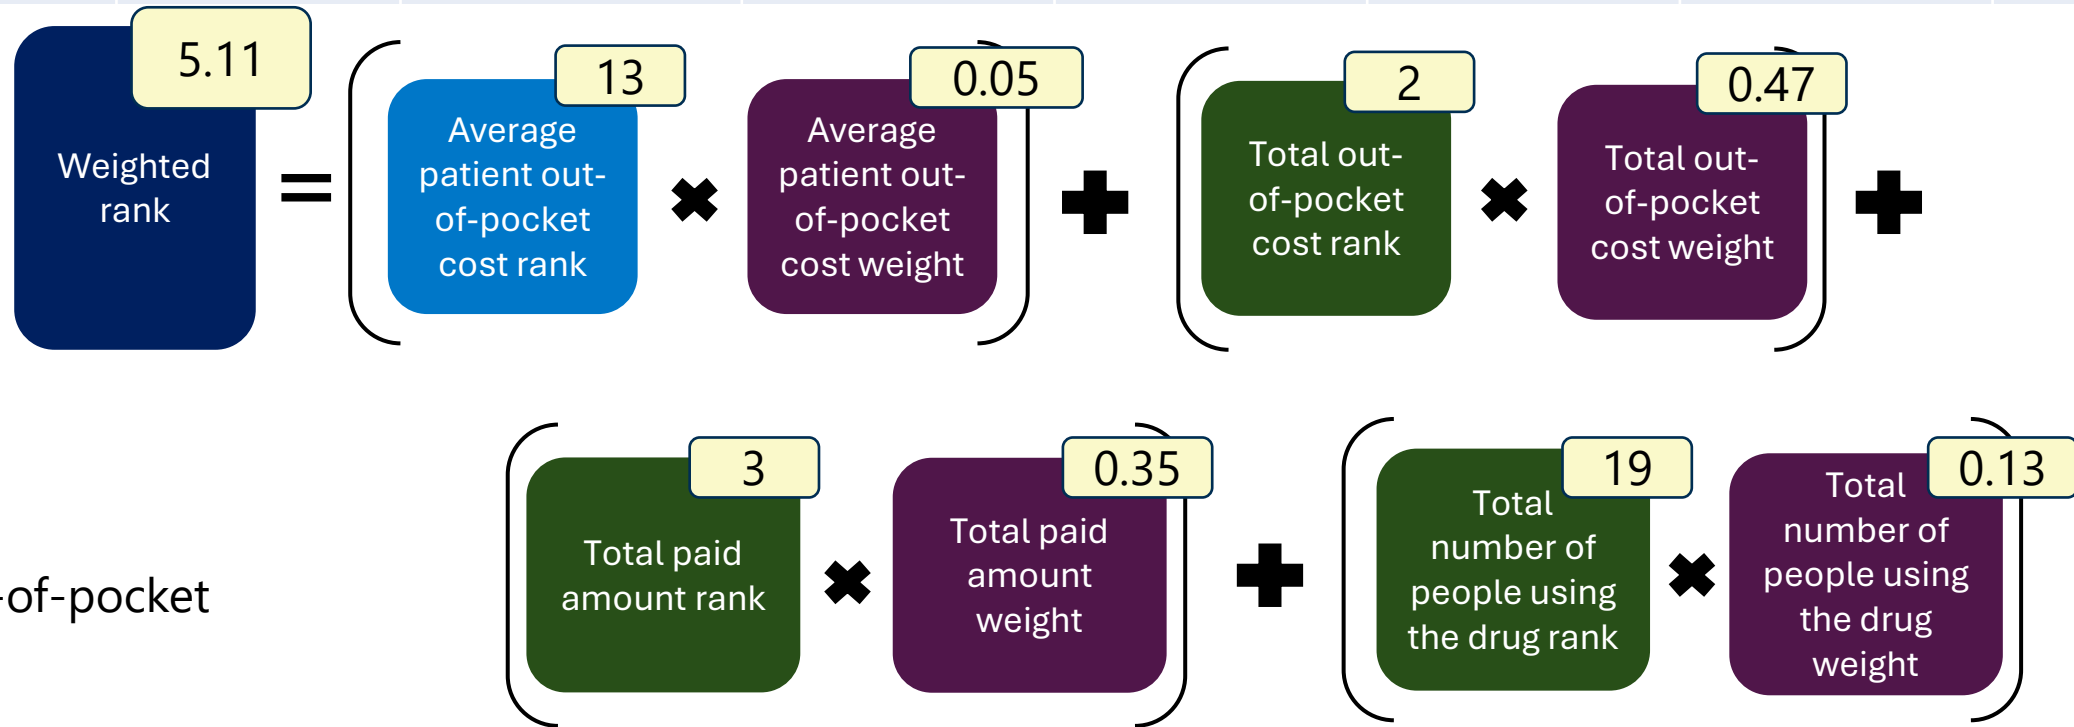

$$\text{Weighted rank} = \left(\text{Average patient out-of-pocket cost rank} \times .05 \right) + \left(\text{Total out-of-pocket cost rank} \times 0.47 \right) + \left(\text{Total paid amount rank} \times 0.35 \right) + \left(\text{Total number of people using the drug rank} \times 0.13 \right)$$

Data Measure Ranking Example

Drug	Average OOP Cost	Average OOP Cost Rank	Total OOP Cost	Total OOP Cost Rank	Total Paid Amount	Total Paid Amount Rank	Total # of People Using the Drug	Total # of People Using the Drug Rank
A	\$427	1 ✖ 0.05	\$5,000	2 ✖ 0.47	\$10,000	5 ✖ 0.35	356	2 ✖ 0.13
B	\$426	2 ✖ 0.05	\$3,000	4 ✖ 0.47	\$15,000	4 ✖ 0.35	123	4 ✖ 0.13
C	\$384	3 ✖ 0.05	\$2,500	5 ✖ 0.47	\$40,000	2 ✖ 0.35	84	5 ✖ 0.13
D	\$200	4 ✖ 0.05	\$7,000	1 ✖ 0.47	\$30,000	3 ✖ 0.35	472	1 ✖ 0.13

Affordability Review Data Sources

Data Source	Definition
Medi-Span	A commercial database containing drug pricing and clinical information for drugs approved by the US Food and Drug Administration (FDA).
First Databank (FDB)	A commercial database containing drug pricing and clinical information for drugs approved by the US Food and Drug Administration (FDA).
Washington State All Payer Claims Database (WA-APCD)	<p>Washington state's most complete source of health and dental insurance data, representing about 70% of the state's population, or over 5 million people.</p> <p>All health carriers in Washington state are required to report their data to the APCD, as well as state Medicaid plans, public employee benefit plans (PEBB), school employee benefit plans (SEBB), third party administrators, and the Washington state labor and industries program. Self-insured commercial plans are not required to report data to WA-APCD. WA-APCD does not contain data for the uninsured population.</p>

Affordability Review Selection Criteria

Total Out-of-Pocket Cost

Criterion	Definition	Data Field	Data Source	Methodology	Criterion Type
Total Out-of-Pocket Cost	Dollar amount showing patient paid amounts for the prescription drug. Patient paid amounts include deductibles, coinsurance, and copayments within one year.	Dollar amount	WA-APCD	Sum of total copay, coinsurance, and deductible amounts paid by patients for the prescription drug in calendar year 2022. Formula: Total copay amount + Total coinsurance amount + Total deductible amount	Quantifiable

Affordability Review Selection Criteria:

Total Paid Amount

Criterion	Definition	Data Field	Data Source	Methodology	Criterion Type
Total Paid Amount	Dollar amount showing the total amount paid by health plans and patients for each prescription drug within one year.	Dollar amount	WA-APCD	<p>Total amount paid by health plan and patients for the prescription drug in calendar year 2022</p> <p>Formula: Total out-of-pocket cost + Total plan paid amount</p>	Quantifiable

Affordability Review Selection Criteria: Number of People Using the Prescription Drug

Criterion	Definition	Data Field	Data Source	Methodology	Criterion Type
Number of People Using the Prescription Drug	The number of patients who had a claim for the prescription drug within one year.	Number	WA-APCD	The count of distinct patients who had a claim for the prescription drug in calendar year 2022.	Quantifiable

Affordability Review Selection Criteria: Therapeutic Equivalent Availability

Criterion	Definition	Data Field	Data Source	Methodology	Criterion Type
Therapeutic Equivalent Availability	Therapeutic equivalence is based on the definition of therapeutic equivalence from section <u>69.41.110</u> RCW: a drug product of the identical base or salt as the specific drug product prescribed with essentially the same efficacy and toxicity when administered to an individual in the same dosage regimen.	Text (Yes/No)	First Databank (FDB)	Retrieve a list of therapeutically equivalent products from the FDB, whose data is based on the FDA Orange Book. If the biological product has a biosimilar, it is also considered as having a therapeutic equivalent based on the section <u>69.41.110</u> RCW definition.	Not quantifiable

Affordability Review Selection Criteria: Generic Availability

Criterion	Definition	Data Field	Data Source	Methodology	Criterion Type
Generic Availability	The brand name prescription drug has an FDA-approved drug that is chemically identical or bioequivalent to the brand name drug in dosage form, safety, strength, route of administration, quality, performance characteristics, and intended use.	Text (Yes/No)	First Databank (FDB), Medi-Span	Link generic prescription drugs to their brand counterparts utilizing their shared unique clinical formulation identifier.	Not quantifiable

Affordability Review Selection Criteria: If The Prescription Drug Meets Multiple Legislative Thresholds

Criterion	Definition	Data Field	Data Source	Methodology	Criterion Type
If the Prescription Drug Meets Multiple Legislative Thresholds	Whether the prescription drug in the list of eligible prescription drugs for affordability review meets multiple selection criteria set forth in section 70.405.030 RCW	Number	List of eligible prescription drugs for affordability review	The prescription drug meets multiple selection criteria set forth in section 70.405.030 RCW	Not quantifiable

Affordability Review Selection Criteria: Input From Relevant Advisory Groups

Criterion	Definition	Data Field	Data Source	Methodology	Criterion Type
Input From the Washington State PDAB Advisory Group (yet to be collected)	The Washington state PDAB advisory group will view the prescription drugs on the affordability review shortlist and give feedback on what prescription drugs should be selected for review.	Text	Washington state PDAB advisory group members	Feedback will be collected from Washington state PDAB advisory group members	Not quantifiable
