WISe Dashboard

Wraparound with Intensive Services

2022 QUARTER 2 UPDATE

• Intensive Care Coordination
• Intensive Mental Health Services Provided in Home and Community Settings
• Mobile Crisis Intervention and Stabilization Services

Prepared by Washington State Department of Social and Health Services
Research and Data Analysis Division
Olympia, Washington

CONTACTS
Bridget Pavelle, PhD, Senior Research Manager, DSHS/RDA, 360.902.0741, bridget.pavelle@dshs.wa.gov
Barb Lucenko, PhD, Chief, RDA Program Research and Evaluation Section, 360.902.0890, barbara.lucenko@dshs.wa.gov
David Mancuso, PhD, Director, DSHS Research and Data Analysis Division (RDA), 360.902.7557, david.mancuso@dshs.wa.gov

| TOTAL POPULATION with linked data available | 20,865 | 6,917 | 11,102 |
| TOTAL POPULATION | 21,037 | 2,858 | 12,988 |

**Data Source:** List of youth screened and referral outcomes from BHAS data, list of youth receiving WISE and in WISE proxy from administrative data (based on service encounters). Characteristics of all three populations from administrative data. Number of youth receiving WISE services may be underestimated due to data completeness issues.

**Notes:** Table presents characteristics of youth screened for WISE and receiving WISE services in time period identified as well as those in the WISE Proxy in SFY 2015. For youth screened more than once for WISE services, type of services screened into reflects the following hierarchy: (1) WISE; (2) CLIP/BRS; (3) Outpatient/Other. For youth screened for WISE, index month is month of screen (or, in the case of multiple screens, first screen in the date range resulting in that type of WISE services). For youth receiving WISE services, index month is the first month in the date range in which youth received services (even if services began in a prior fiscal year). For youth in WISE proxy, index month is first month of Medicaid eligibility in SFY 2015. Region information is displayed using current Behavioral Health Organization (BHO) and Integrated Managed Care (IMC) boundaries. Region assignment is based on location of residence in index month for proxy, and region of screening or service for screened and served populations. Due to data lag, a small number of youth screened and/or served could not yet be linked with administrative data. In order to protect the privacy of individuals, cells in this data product that contain small numbers from 1 to 10 are not displayed. Some additional cells with n>10 have been suppressed to ensure that cells with small numbers cannot be recalculated.

**DATA SOURCE:** Administrative data (ProviderOne).

**NOTES:** WISe services include WISe service encounters recorded in P1 data system, including all behavioral health outpatient services received in a month with at least one "U8" mental health service. Region information is displayed using January 2019 Behavioral Health Organization (BHO) and IMC boundaries. Youth served in more than one region during the report date range have been allocated to the region in which they received the greatest number of WISe "U8" service encounters in the date range. Service months and service encounters for youth served in more than one region during a month have been allocated to the region in which they received the greatest number of WISe service months during the month. No lag factors applied.

Median length of stay shown for episodes of WISe services starting in time period specified. Because SUD data is not available prior to April 2016, SUD services are underreported.

DATA SOURCE: Behavioral Health Assessment System (BHAS).

NOTES: These statistics reflect change over time in actionable treatment needs and youth strengths as identified on the CANS Full Assessment, conducted at intake and at 6-month follow up, for youth participating in the WISE program. The sample includes youth who completed a CANS initial assessment between 07/1/2014 and 9/30/2021 and whose 6-month reassessment was available in BHAS as of 4/30/2022. Youth served in different regions at the intake and 6-month time point have been allocated to the region in which their 6-month CANS was completed. The table displays the proportion of children with clinically significant treatment needs at each time point, i.e. the clinician rated the item as a 2 (“need for action”) or 3 (“need for immediate or intensive action”) instead of a 0 (“no current need”) or 1 (“watchful waiting/prevention”). The top five treatment needs within each domain, by proportion at intake/initial assessment, are shown. The top five ranking reflects the statewide ranking and may not reflect item rank order for each region. A decline at the time of the 6-month reassessment represents improvement for these measures, i.e., a decrease in the proportion of children and youth with clinically significant treatment needs in these areas. TA (Transition to Adulthood) items are only administered to youth age 15+. The top five strengths, by growth over time, are shown. An increase at the time of the 6-month reassessment represents improvement for these measures, i.e., an increase in the proportion of children and youth with identified strengths that can be used in treatment planning to facilitate recovery. Strengths are identified when the clinician rated a strengths item as a 0 (“significant strength”) or 1 (“some strength”) instead of a 2 (“potential strength”) or 3 (“no strength identified at this time”). In order to protect the privacy of individuals, cells in this data product that contain small numbers from 1 to 10 are not displayed.

Some additional cells with n>10 have been suppressed to ensure that cells with small numbers cannot be recalculated. Regions reflect HCA managed care regions as of January 2019.

**DATA SOURCE:** Behavioral Health Assessment System (BHAS).

**NOTES:** These statistics reflect change over time in actionable treatment needs and youth strengths as identified on the CANS Full Assessment, conducted at intake and at 6-month follow up, for youth participating in the WISe program. The sample includes youth who completed a CANS initial assessment between 10/1/2020 and 9/30/2021 and whose 6-month reassessment was available in BHAS as of 4/30/2022. Youth served in different regions at the intake and 6-month time point have been allocated to the region in which their 6-month CANS was completed. The table displays the proportion of children with clinically significant treatment needs at each time point, i.e. the clinician rated the item as a 2 ("need for action") or 3 ("need for immediate or intensive action") instead of a 0 ("no current need") or 1 ("watchful waiting/prevention"). The top five treatment needs within each domain, by proportion at intake/initial assessment, are shown. The top five ranking reflects the statewide ranking and may not reflect item rank order for each region. A decline at the time of the 6-month reassessment represents improvement for these measures, i.e., a decrease in the proportion of children and youth with clinically significant treatment needs in these areas. TA (Transition to Adulthood) items are only administered to youth age 15+. The top five strengths, by growth over time, are shown. An increase at the time of the 6-month reassessment reflects improvement for these measures, i.e., an increase in the proportion of children and youth with identified strengths that can be used in treatment planning to facilitate recovery. Strengths are identified when the clinician rated a strengths item as a 0 ("significant strength") or 1 ("some strength") instead of a 2 ("potential strength") or 3 ("no strength identified at this time"). In order to protect the privacy of individuals, cells in this data product that contain small numbers from 1 to 10 are not displayed. Some additional cells with n>10 have been suppressed to ensure that cells with small numbers cannot be recalculated. Regions reflect HCA managed care regions as of January 2019.
